Dashboard Testing Report

Hospital Operations & Patient Analytics Dashboard

Prepared for: MedTrack_DV Project

Visualization Tool: Tableau

Page 2 — Testing Objective

The objective of dashboard testing is to verify that the Hospital Operations & Patient Analytics Dashboard is correctly developed, visually consistent, and suitable for analyzing hospital operations, patient flow, department performance, and resource utilization.

Dashboards tested:

1. Hospital Overview
 2. Patient Flow
 3. Department Analysis
 4. Resource Utilization
-

Page 3 — Data & KPI Validation

Include the important KPI results you already calculated:

KPI	Result
Total Cases	500
Total IP Admissions	141
IP Admission Rate	28.20%
Average LOS	1.28
Average IP LOS	4.19
Total Revenue	₹8,523,364
Average Revenue	₹17,046.73

Validation Result: Passed

Page 4 — Dashboard Testing

Dashboard	Testing Area	Result
Hospital Overview	KPIs & visualizations	Passed
Patient Flow	Patient/admission analysis	Passed
Department Analysis	Specialty & revenue analysis	Passed
Resource Utilization	Doctor/resource analysis	Passed

All four dashboards were integrated into the Tableau workbook according to the planned dashboard structure.

Page 5 — Final Testing Summary

Testing Areas

- Data validation — Passed
- KPI validation — Passed
- Dashboard development — Passed
- Filters — Passed
- Navigation — Passed
- Visualization — Passed
- Dashboard integration — Passed
- Final Tableau workbook — Passed

Final Result

Overall Testing Status: PASSED

The final dashboard contains the four planned interconnected dashboards and is ready for documentation and delivery.
