PROFESSIONAL SUMMARY

Final-year B.E. student in Artificial Intelligence and Data Science with hands-on experience in SQL, Power BI, Tableau, and Python for data cleaning, analysis, and visualization. Skilled at translating raw datasets into actionable business insights through dashboards and statistical analysis. IBM-certified with national-level hackathon experience. Seeking a Data Analyst internship or entry-level role to apply analytical and problem-solving skills in a data-driven organization.

EDUCATION

BGS College of Engineering and Technology, Bangalore

Expected Aug 2027

Bachelor of Engineering — Artificial Intelligence and Data Science | CGPA: 9.0 / 10

INTERNSHIP EXPERIENCE

Data Visualization Intern — Infosys Springboard Virtual Internship 7.0

Ongoing (8 Weeks)

- Selected for an 8-week virtual internship focused on data visualization, working with real-world datasets to build dashboards and visual reports.
- Applying data cleaning, exploratory analysis, and visualization best practices as part of structured, industry-mentored project modules.

TECHNICAL SKILLS

- Data Analysis & Visualization: SQL, Power BI, Tableau, Python (Pandas, NumPy), MS Excel, Statistical Analysis
- Programming Languages: Python, SQL, Solidity
- Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code
- Other: Machine Learning (Scikit-learn), Web3.js, IPFS, Smart Contracts

PROJECTS

Retail Sales Performance Dashboard

2026

SQL, Power BI, Python (Pandas)

- Designed and queried a relational sales database using SQL (joins, subqueries, window functions) to consolidate transaction, product, and store-level data.
- Built an interactive Power BI dashboard with drill-down visuals tracking revenue, regional performance, and top-selling products across multiple filters.
- Cleaned and transformed raw sales data using Python/Pandas, resolving inconsistencies across 5+ source fields to improve reporting accuracy.
- Surfaced actionable insights (e.g., underperforming regions, seasonal demand trends) to support data-driven business decisions.

Weather Prediction System

2025

Python, Pandas, Scikit-learn, Matplotlib

- Built an end-to-end data pipeline to clean, explore, and analyze historical weather datasets, uncovering key temperature and precipitation trends.
- Performed feature engineering and exploratory data analysis (EDA) to identify variables most predictive of weather outcomes.
- Trained and evaluated Regression and Classification models, achieving measurable accuracy improvements benchmarked using RMSE, Accuracy, and F1-score.

Blockchain-Enabled Patient Health Records

2025

Ethereum, Solidity, IPFS, Web3.js, AES-256

- Architected a decentralized health record system using IPFS for off-chain storage and Ethereum for tamper-proof data integrity.
- Built Solidity smart contracts enabling patients to grant or revoke provider access in real time, with AES-256 encryption for HIPAA-compliant data privacy.

CERTIFICATIONS

- Artificial Intelligence Fundamentals — IBM SkillsBuild
- Enterprise Design Thinking Practitioner — IBM SkillsBuild

ACHIEVEMENTS & INVOLVEMENT

- National-Level 24-Hour Hackathon: Qualified through two elimination rounds and delivered a working prototype as part of a 5-member team under strict time constraints.
- Solved 180+ SQL problems on LeetCode, strengthening query optimization and data-manipulation skills.
