

MedTrack_DV — Dataset Sources

Project: MedTrack_DV — Hospital Operations & Patient Analytics Dashboard (Group 2)
Mentor: Pathina Likhita

1. Overview

MedTrack_DV is a healthcare operations and patient analytics dashboard suite developed using Tableau. The Tableau workbook uses the following cleaned and enriched healthcare patient-flow dataset:

[cleaned_healthcare_patient_flow_data_enriched.csv](#)

This dataset is used across the four dashboards:

1. Hospital Overview
2. Patient Flow
3. Department Analytics
4. Resource Utilization

2. Dataset Purpose

The dataset supports analysis of:

- Patient admissions
- Patient flow
- Patient waiting time
- Length of stay
- Readmission
- Patient satisfaction
- Department performance
- Bed capacity
- Bed occupancy
- Resource utilization
- Department efficiency

3. Patient Information

Field	Description
<code>patient_id</code>	Unique patient identifier

Field	Description
patient_age	Patient age
patient_gender	Patient gender
patient_race	Patient race/category
age_group	Grouped patient age category

4. Admission Information

Field	Description
patient_admission_date	Patient admission date
patient_admission_time	Patient admission time
admission_status	Patient admission status
admission_shift	Admission shift
patient_admission_flag	Admission indicator
admission_year_month	Monthly admission grouping

5. Department Information

Field	Description
department_referral	Department associated with the patient
department_group	Department grouping

Departments represented in the Tableau workbook include:

- Cardiology
- Orthopedics
- Neurology
- Renal
- General Practice
- Physiotherapy
- Gastroenterology

6. Patient Flow Information

Field	Description
patient_waittime	Patient waiting time
waittime_category	Waiting-time category
waittime_over_45min	Indicator for waiting over 45 minutes
length_of_stay_days	Patient length of stay

7. Discharge Information

Field	Description
patient_discharge_date	Patient discharge date
discharge_year_month	Discharge year-month
discharge_month_name	Discharge month name

8. Patient Outcome Information

Field	Description
is_readmitted	Readmission indicator
readmission_status	Readmission status
patient_satisfaction_score	Patient satisfaction score

9. Resource Information

Field	Description
total_beds	Total bed capacity
occupied_beds	Occupied beds

Field	Description
bed_occupancy_rate	Bed occupancy/utilization rate

10. Department Analytics

The Tableau workbook uses:

department_efficiency_score

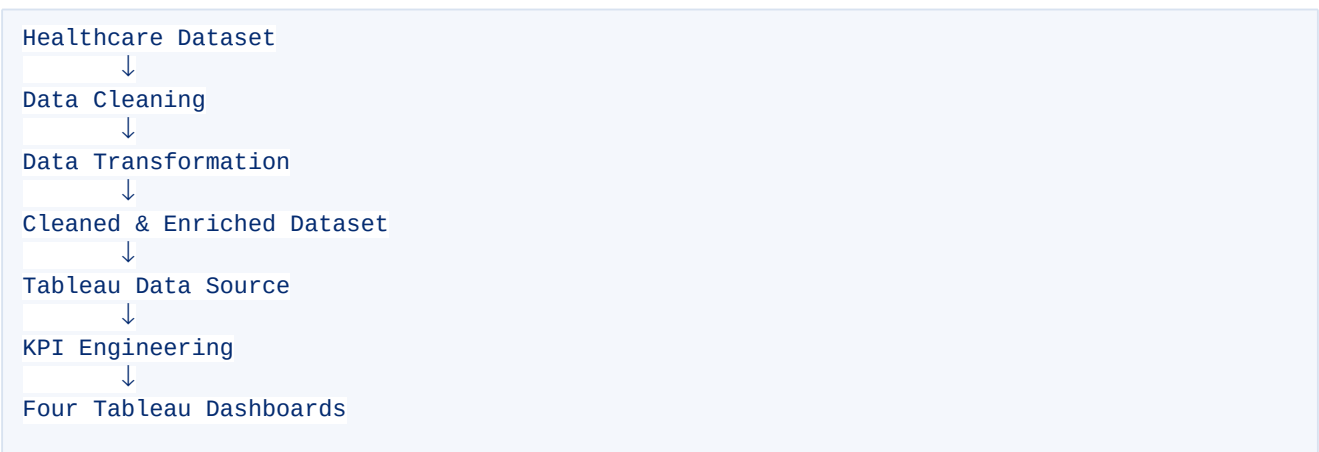

This field is used to compare operational efficiency between departments.

11. Data Preparation

The project data preparation process includes:

1. Collecting hospital operational data.
2. Collecting patient admission data.
3. Integrating healthcare datasets.
4. Removing duplicate records.
5. Handling missing patient data.
6. Standardizing department names.
7. Normalizing healthcare indicators.
8. Creating a Tableau-ready analytical dataset.

12. Tableau Data Flow

13. Data Quality Summary

Check	Result
Records	9,216 (unique <code>patient_id</code>)
Fields	41 analytical fields
Coverage	19 months — Apr 2023 → Oct 2024
Departments	7 departments
Admission status	4,612 Admitted · 4,604 Not Admitted
